

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 August 2026
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization:

This individual brainstorming activity focuses on identifying and prioritizing ideas for automating network request management in ServiceNow. The objective is to reduce manual work, improve request tracking, and provide faster and more consistent processing.

Project Focus: Automate network-related request creation, assignment, approval, notifications, SLA monitoring, escalation, dashboards and reporting using ServiceNow.

Step-1: Problem Identification and Problem Statement

Selected Problem Statement

How might I automate the network request management process in ServiceNow to reduce manual work, improve request tracking, and ensure faster assignment and resolution of network-related requests?

Individual Ideation Points

1	Identify common network request types and required information.
2	Automate assignment of requests to the appropriate network support group.
3	Create an approval workflow for requests that require authorization.
4	Send automatic notifications for request creation, updates and completion.
5	Track SLA deadlines and automatically escalate delayed requests.

Step-2: Brainstorm, Idea Listing and Grouping

The ideas generated individually are grouped into major solution areas to identify the most useful features for the proposed ServiceNow solution.

Request Management	• Automated network request creation • Request categorization • Request status tracking
Workflow Automation	• Automatic request assignment • Approval workflow • Automatic notifications • Automated escalation
Monitoring	• SLA monitoring • Priority-based request handling • Network support dashboard
Reporting	• Reports and analytics • Performance monitoring

Idea Prioritization

Priority	Idea	Reason
1	Automated Assignment	Reduces manual work and routes requests quickly.
2	Approval Workflow	Ensures proper authorization before processing.
3	SLA Monitoring & Escalation	Helps prevent delays and missed SLAs.
4	Notifications & Tracking	Keeps request information updated and visible.
5	Dashboard & Reports	Provides visibility into request performance.

Final Prioritized Idea

Automated Network Request Management using ServiceNow — A workflow-based solution for network request creation, automatic assignment, approvals, notifications, SLA tracking, escalation, dashboards and reporting.

Expected Benefits: Faster request processing, reduced manual effort, better visibility, consistent approvals, improved SLA compliance, and efficient network support operations.
