What do people experience as they begin the process?	What happens in the core moments in the process?
User opens the ServiceNow portal and signs in.	User selects the Network Request catalog item and provides required details.
Portal navigation, catalog search, request form.	Variables such as request type, location, access type, and business justification.
Help me start the request quickly.	Help me provide the right information without confusion.
The catalog item is easy to find and the form is structured.	Required fields and choices reduce incomplete submissions.
Too many catalog options can make navigation confusing.	Missing or unclear information can cause rework.
Use intuitive categories, search and concise descriptions.	Add smart defaults, validation, examples and contextual help fields.

request management • approval workflow • SLA visibility • notifications • request tracking • closure and feedback
