

Technology Stack

Date	15 August 2026
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

The solution uses **ServiceNow** as the central IT service management platform. A **Network Request Catalog Item** is provided through the ServiceNow Service Portal to capture request details. **Flow Designer** automates approvals and task assignment to the appropriate network support teams. The generated tasks are tracked in ServiceNow, and notifications provide status and completion updates to the requester.

Architecture of Automated Network Request Management in ServiceNow

Reference: ServiceNow Service Catalog, Flow Designer and task-management concepts.

Technology / Component	Purpose
ServiceNow Service Catalog	Provides the Network Request catalog item and captures requester inputs.
Service Portal	Provides the user-facing interface for submitting and tracking requests.
Flow Designer	Automates approvals, routing and task assignment.
Network Support Team	Receives and fulfills the generated network tasks.
ServiceNow Notifications	Sends request status and completion updates to the requester.
