

SOLUTION ARCHITECTURE

Automated Network Request Management

PROJECT DATE 15-08-2026	MAXIMUM MARKS 4 Marks	PROJECT TYPE ServiceNow Workflow
----------------------------	--------------------------	-------------------------------------

1. Architecture Overview

The solution automates the complete network-request lifecycle using ServiceNow Flow Designer. The workflow uses actions such as Get Catalog Variables, Create Record, Ask for Approval, Flow Logic, Send Email, and Update Record.

REQUESTER	SERVICE CATALOG	FLOW DESIGNER	APPROVER	NETWORK / IT
Submit request	Capture variables	Validate & route	Approve / Reject	Fulfil request

Request → Catalog → Automated Workflow → Approval → Fulfillment → Status Notification

2. Solution Layers

Layer	Component	Primary Function
User Layer	Requester / IT Team / Approver	Submit, review, approve, and process network requests
Application Layer	ServiceNow Service Catalog	Provides the Network Request catalog item
Form Layer	Catalog Variables & UI Policies	Captures request details and displays fields dynamically
Workflow Layer	Flow Designer	Automates request processing and approval
Approval Layer	Ask for Approval	Handles approval or rejection of requests
Data Layer	Network Database Table	Stores network request information
Notification Layer	Email Notification	Sends request status and approval updates
Fulfillment Layer	Network / IT Team	Processes approved requests
Reporting Layer	Reports & Analytics	Monitors request volume, resolution time, and SLA performance

3. Expected Outcome

The architecture provides a structured and automated process for network requests, reducing manual coordination while maintaining approval control, status notifications, data storage, and reporting visibility.
